

Installation

To install the solution, you will need a server running a Linux or Windows operating system that is connected to the Internet.

It must have a minimum of 2 gigabytes of RAM and open ports 8080 for web client operation and 7652 for desktop client operation.

(The commands listed below are provided to install in a Centos7 environment with root privileges)

Install Server and Client lsFusion:

```
root@centos7: localectl set-locales LANG=ru_RU.UTF-8

root@centos7: source <(curl -s https://download.lsfusion.org/yum/install-lsfusion4)
```

Install MyCompany business logic:

```
root@centos7: yum install -y wget
root@centos7: wget http://download.lsfusion.org/solutions/mycompany-1.0.jar -O /var/lib/lsfusion/mycompany.jar

root@centos7: echo "logics.topModule = MyCompanyRu" >> /etc/lsfusion4-server/settings.properties
```

Restart lsFusion Server:

```
root@centos7: systemctl stop lsfusion4-server
root@centos7: systemctl start lsfusion4-server
```

You can use the scripts below:

[install-mycompany-centos8.sh](#)

Download the installation script:

```
root@centos8: dnf install -y wget

root@centos8: wget "https://mycompany-docs.lsfusion.org/download/attachments/1802288/install-mycompany-centos8.sh" -P /tmp
```

Allow to run the downloaded installation script :

```
root@centos8: chmod +x /tmp/install-mycompany-centos8.sh
```

Run script:

```
root@centos8: /tmp/install-mycompany-centos8.sh
```

[install-mycompany-ubuntu18.sh](#)

Download the installation script:

```
root@ubuntu18: wget "https://mycompany-docs.lsfusion.org/download/attachments/1802288/install-mycompany-ubuntu18.sh" -P /tmp
```

Allow the downloaded file to run with the command:

```
root@ubuntu18: chmod +x /tmp/install-mycompany-ubuntu18.sh
```

Run the installation script with the command:

```
root@ubuntu18: /tmp/install-mycompany-ubuntu18.sh
```

[install-mycompany-centos7.sh](#)

Download the installation script:

```
root@centos7: yum install -y wget
```

```
root@centos7: wget "https://mycompany-docs.lsfusion.org/download/attachments/1802288/install-mycompany-centos7.sh" -P /tmp
```

Allow the downloaded file to run with the command:

```
root@centos7: chmod +x /tmp/install-mycompany-centos7.sh
```

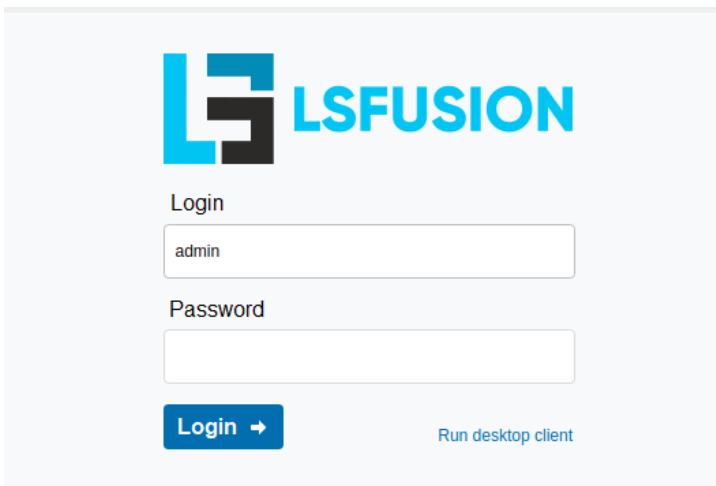

Run the installation script with the command:

```
root@centos7: /tmp/install-mycompany-centos7.sh
```

Download and run the installer [MyCompany-1.0-x64.exe](#) or [MyCompany-1.0.exe](#)

Log in to MyCompany

1. Open MyCompany web interface in your browser <http://your-server-ip:8080>
2. In the open window sign in using login **admin** without password.
